Attention: NatureBee Ltd

Reference: review of test results relating to pesticides, agrichemicals and heavy metals in bee pollen used in NatureBee products

I have reviewed the test reports undertaken by accredited laboratories to measure the levels of agrichemicals, pesticides and heavy metals in NatureBee pollen. All reported levels of pesticides and agrichemicals are below the lower detection limit, so they are classified as not present in the sample. The heavy metals are lower than the limits set for food (FSANZ and Codex). These findings confirm that NatureBee pollen meets strict quality and safety standards, ensuring it is a pure and natural product suitable for consumption.

Yours sincerely
